SECTION 2 • TECHNOLOGY OPTIONS

LENS OPTIONS & PACKAGES

TAILORING YOUR VISION LIFESTYLE

Reference: : Book Pages 11 – 15, 30 & 34

Because insurance only covers a standard monofocal lens, you can choose advanced technology to reduce your dependence on eyeglasses:

PACKAGE	COST	FEATURES & DISTANCE
Standard Monofocal	**Covered by Ins.***	Sharp focus at 1 distance (usually distance). Glasses needed for reading & computer.
Gold Astigmatism / EMV	**$1,500** per eye	Corrects mild astigmatism (LRI incisions) or Rayner EMV lens for distance + intermediate.
Platinum Toric IOL	**$2,500** per eye	Custom Toric lens designed to neutralize moderate-to-high astigmatism for crisp vision
Platinum Elite Multifocal	**$3,500** per eye	Provides full range (distance, intermediate & near). Designed for life with minimal glasses!

*Patient is responsible for standard insurance copays and deductibles

What is Astigmatism? (Book p. 14)
Cornea shaped like a football instead of a basketball. Uncorrected astigmatism blurs vision at all distances. Toric lenses or LRI reshape optical focus.

Zero-Interest Financing:
Monthly payment plans are available through our surgical counselors to fit your budget.

SECTION 3 & 4 • SURGERY PREP

LENS OPTIONS & PACKAGES

ESSENTIAL STEPS BEFORE SURGERY DAY

Reference: : Book Pages 16, 17, 22 & 36

99% Dropless Surgery Advantage!
Dr. Jackson administers antibiotic and anti-inflammatory medication directly during surgery at no extra charge. Most patients need **no messy eye drops** post-op!

MANDATORY PRE-SURGERY TIMELINE

- **5 Days Prior (Contact Lenses):** Stop wearing soft contacts 5 full days before consultation & biometry. (Hard contacts: 1 wk per decade worn).
- **4 Days Prior (Lid Hygiene):** Scrub eyelids with lid hygiene pads twice daily (morning & night), and morning of surgery only.
- **3 Days Prior (Blood Pressure):** Strict low-sodium diet (NO salt). Take regular blood pressure meds morning of surgery with a sip of water & bring meds with you! Systolic >190 cancels surgery.
- **Day of Surgery Diet:** No caffeine on surgery day. Light eating is permitted (99% oral sedation has no fasting requirement).
- **What to Wear & Bring:** Loose button-up shirt, photo ID, insurance card, and payment (cash/check/debit to avoid 3% card fee). NO makeup, perfume, or jewelry.

If NOT Dropless (Allergy Patients)
Pick up prescription Prednisolone, Antibiotic, and NSAID drops from your pharmacy and start 3 days prior as instructed (Book p. 16–17).

Please bring your 40-Page Booklet to all clinic and optometrist visits!

SECTION 5 • SURGICAL JOURNEY

SURGERY DAY & RECOVERY

WHAT TO EXPECT DURING YOUR VISIT

Reference: Book Pages 18 - 20 (What to Expect / Recovery)

Comfortable, Awake & Safe
Surgeries are performed in state-of-the-art German zero-gravity ergonomic chairs. Light oral sedation is provided (no IV usually needed). A topical anesthetic fully numbs the eye in seconds.

- **Gentle Drape & Speculum:** A light, breathable drape covers you. An eyelid holder keeps your eye gently open - you will not feel the urge to fight blinking.
- **Kaleidoscope of Lights:** You will only see vibrant colored lights and water fluid. No sharp needles or surgical blades will ever be seen!
- **Quick 8–20 Minutes:** Ultrasound energy breaks up the cloudy lens and the new artificial lens is implanted seamlessly.

Post-Op Recovery Area: You will rest in recovery, enjoy a drink and snack, and review discharge care. Total facility time is 90–120 minutes

Mandatory Adult Driver Policy
Because oral sedatives impair reaction time like alcohol, you cannot drive. Your driver drops you off and receives automated text updates on your progress.

Normal Day 1 Sensations
Mild "scratchy pebble" sensation or red surface bruise from medicine deposit are 100% normal. Keep eye closed and rest!
